3M

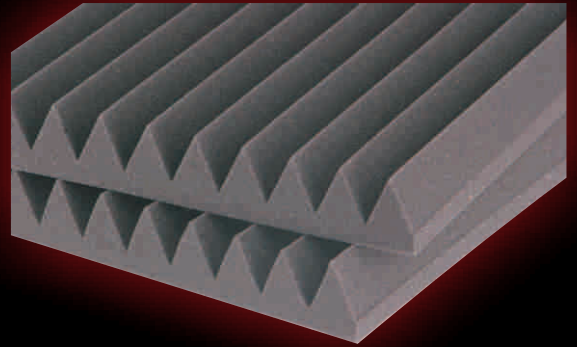

PYRAMID 2"

Use these to treat small to medium-sized areas including iso booths, control rooms, studios, home theaters, video editing suites and more. They effectively kill standing waves and flutter echoes and, when used in conjunction with our Bass Traps, can effectively tame the full frequency bandwidth in any commonly sized room.

2" Pyramid offer a bit of extra diffusion and slightly less absorption than 2" Wedge, so they yield a less dry-sounding space with a bit more "air"

WEDGE 2"

12" Wedge are the top seller and our best overall performer, Use them to treat small to medium -sized areas including vocal booth, control rooms, studios, home theaters, video editing suites and more. They effectively kill standing waves and flutter echoes and, when used in conjunction with our Bass Trap, can successfully tame the full frequency bandwidth in virtually any commonly sized room. 2" wedge is quite simply the workhorse of the industry and is your safest bet if you are tuning your room yourself without the help of a professional acoustician.

BASS TRAP

CONTROLLING THE LOW FREQUENCIES

Corners cause bass humps in our rooms' frequency response. Critical monitoring is difficult in all but the most costly rooms. Extensive and expensive bass trapping abounds. with our Bass Trap rooms actually sound good and look cool. Corners don't cause the headache they once did. Checkbook balances contain numbers much larger than zero.

Low-frequency sound waves are so long-and thus so strong that they are the toughest to control. This is the true no matter you are attempting to block their transmission to a neighboring space or trying to absorb them to clean up the low-frequency response within a room. Controlling low-frequency sound is harder than controlling mid or high frequency sound, and generally requires more effort and expense.

This product will protect you from the low-frequency problems.

ALPHA PACKAGE

YOUR DEALER

32 PCS OF PYRAMID 2"
